Low Carbon Pathways for Growth in India Rajat Kathuria

2018-08-01 This book explores ways in which India can

negotiate the low carbon path up until 2030, when it is

expected to be the largest economy after the US and

China. It comprehensively reviews the low climate

pathways for India and provides a guide to the pathways

that the country can adopt. India's population, energy

demands and emissions will increase significantly, and

the challenge is to restrict its CO₂ emissions and walk the

low carbon path. Through its Intended Nationally

Determined Contributions (INDCs), India has pledged to

reduce its emissions significantly. Addressing the

question of which low carbon paths India can adhere to

without compromising its growth, the book identifies the

key factors that feed into existing models of climate

change and discusses the cost of action versus inaction.

It also examines key issues concerning India's

environment through the lens of the transport, industry

and water sectors. The book concludes by looking at

policy implications for low carbon growth in India.
