Indische Kultur im Kontext Klaus Mylius 2005 Indische Kultur im Kontext ist eine Festschrift zum 75. Geburtstag des international bekannten Indologen Klaus Mylius. Der Band enthält Beiträge von erstrangigen Vertretern der Indologie aus den USA, Japan, der Schweiz, Deutschland, Belgien, Ungarn, Finnland und Indien. Weitere Artikel, die Themen aus anderen Kulturen mit Bezügen zu Indien behandeln, wurden von Freunden und Weggefährten des Jubilars verfasst. Das Spektrum der Beiträge spiegelt das umfangreiche Schaffen von Klaus Mylius wider. Mehrere Autoren behandeln Rituale und Texte des altindischen Veda, die über viele Jahrzehnte sein Hauptforschungsgebiet bildeten. Andere Artikel beschäftigen sich mit religions-, literatur- und wissenschaftsgeschichtlichen Themen der Indologie. Die nichtindologischen Themen, die grosstenteils Bezüge zu Indien haben, behandeln etwa chinesische Legenden, die europäische Aufklärung oder das Bild der Venus in der Kunstgeschichte. Insgesamt demonstriert der Band eine Idee, die Klaus Mylius selbst immer verfolgt hat: Die adäquate Interpretation indischer Texte kann nur bei Beachtung der jeweiligen - indischen und ausserindischen - Kontexte gelingen.

Makers and Shapers Shereen Ratnagar 2007 This is a study of technology as self-help endeavor in the home and the provisioning of the household; as work in the rural workshop that supplies pots or iron tools for the village; and as techniques mastered in the urban workshop feasible not in simple tribal villages but when new production institutions emerge with the development of a political hierarchy. It travels from the agricultural field to the building of the home (with its food-processing and storage facilities), to urban water supply techniques and transport mechanisms, to the use of stone, bronze and iron for tools and weapons. A glimpse is afforded of the difference between the making of pottery by hand and the use of the potter's wheel. The social circumstances required of pottery production are in turn contrasted with those required of metallurgy. The whole is based on the archaeological evidence of the Neolithic to Iron Age cultures of South Asia, and concurrently, on observations of some technological processes followed by villagers today. The book asks if it is the nature of tools available that could have made possible the use of materials such as certain semi-precious stones or ivory. Which were the craft technologies that depended on bronze tools in the Indus cities? Else, it may have been horse-riding that prompted chiefs of southern India to sponsor the production of new kinds of iron weapons. It is, besides, possible that the charcoal requirements of early iron-smelting and forging are connected with localized deforestation, and that this had a role to play in the organization and dispersal of the industry. Why were masonry wells so rare after the Indus Valley civilization? Why is glass production known in the Bronze Age of Western Asia but in the Iron Age of South Asia? In what economic circumstances did people begin to use wheeled transport? Technology is not viewed here as a self-generating phenomenon. Instead, puzzles are explained by social and economic factors such as the nature of the

work group and the resultant production process, and by political structures as well.

Water and Scriptures K. V. Raju 2017-05-04 This collection of papers aims to draw lessons and apply indigenous knowledge, wisdom and cultural traditions to suit policy contexts describing the (a) role of individuals (b) communities, and (c) the state to ensure effectively manage water resources. Readers will discover ways in which water was conceptualized, conserved and managed. Contributions will also shed light on the historical, functional and futuristic perspectives of water resources management, and readers will be able to draw lessons and evolve policy guidelines. There are some studies related to scriptures across religions and their perceptions regarding ecological conservation. However, religious studies and their socio-economic and environmental relevance to society, more specifically to the current policy contexts, are limited. This book attempts to bridge this gap, in terms of learning lessons from the past to effectively address the challenges of the present and future. The book will be useful for historians and research scholars studying the place of water in different cultures, water pricing and water sharing; as well as ecologists and environmental scientists.

Herbarium Barbara M. Thiers 2020-12-08 A treasury like no other Since the 1500s, scientists have documented the plants and fungi that grew around them, organizing the specimens into collections. Known as herbaria, these archives helped give rise to botany as its own scientific endeavor. Herbarium is a fascinating enquiry into this unique field of plant biology, exploring how herbaria emerged and have changed over time, who promoted and contributed to them, and why they remain such an important source of data for their new role: understanding how the world's flora is changing. Barbara Thiers, director of the William and Lynda Steere Herbarium at the New York Botanical Garden, also explains how recent innovations that allow us to see things at both the molecular level and on a global scale can be applied to herbaria specimens, helping us address some of the most critical problems facing the world today. At its heart, Herbarium is a compelling reminder of one of humanity's better impulses: to save things—not just for ourselves, but for generations to come.

Plant Pathology in India S.S. Chahal 2010-04-01 The book makes a modest attempt to highlight the major achievements. The first chapter highlights the status of plant pathology in India before 1905 and sets the stage for an overview of the developments made in the last 100 years. Chapters on significant achievements and current status of knowledge has been contributed by leading experts on mycology, bacteriology, virology and nematology, and also on epidemiological research, fungicide research, biological control, host plant resistance against pathogens and on the application of biotechnological approaches for management of plant diseases. This covered the major broad areas of research in plant pathology. Besides, non conventional chapters encompassing the areas of international co-operation, policy issues and uncommon opportunities are also included along with the role of professional societies of plant pathology in India. History of Krishi-Parashara Gyula Wojtilla 2006 The practice and theory of agriculture occupies a special branch of sciences called krishishastra literature 'agricultural science' in the traditional Indian taxonomy of sciences. This knowledge is deposited in the krishishastras literature 'textbooks of agriculture', in didactic poetry or single chapters or passages of literary works of different genres and in various collections of popular sayings. These texts together are rich mines of information on the methods of weather forecast, the main events of the agricultural year comprising agricultural operations, events of village life and certain religious beliefs. Gyula Wojtilla in the first part of his book defines the various meanings of the term krishishastra and assigns its role among traditional sciences in India. It is followed by the major part of the book containing the detailed description of individual works on traditional agriculture written mainly in Sanskrit but also in Prakrit and in vernaculars such as Bengali, Bihari, Gujarati, Hindi, Kanarese, Malayalam, Maithili, Marathi, Rajasthani, Tamil and Telugu. At the end of the book there are four appendices comprising texts containing independent chapters) on the subject, collections of sayings others than ascribed to authors and miscellaneous issues. The book as such can be regarded as an literary encyclopaedia of traditional Indian agriculture and may serve as an indispensable tool of research for students of classical Indology, history of science and culture or the peasant society in India.

Religion and Sustainable Agriculture Todd LeVasseur 2016-10-21 Distinct practices of eating are at the heart of many of the world's faith traditions -- from the Christian Eucharist to Muslim customs of fasting during Ramadan to the vegetarianism and asceticism practiced by some followers of Hinduism and Buddhism. What we eat, how we eat, and whom we eat with can express our core values and religious devotion more clearly than verbal piety. In this wide-ranging collection, eminent scholars, theologians, activists, and lay farmers illuminate how religious beliefs influence and are influenced by the values and practices of sustainable agriculture. Together, they analyze a multitude of agricultural practices for their contributions to healthy, ethical living and environmental justice. Throughout, the contributors address current critical issues, including global trade agreements, indigenous rights to land and seed, and the effects of postcolonialism on farming and industry. Covering indigenous, Buddhist, Hindu, Christian, Muslim, and Jewish perspectives, this groundbreaking volume makes a significant contribution to the study of ethics and agriculture.
