Wonder-Full Education Kieran Egan 2013-07-24 For many children much of the time their experience in classrooms can be rather dull, and yet the world the school is supposed to initiate children into is full of wonder. This book offers a rich understanding of the nature and roles of wonder in general and provides multiple suggestions for to how to revive wonder in adults (teachers and curriculum makers) and how to keep it alive in children. Its aim is to show that adequate education needs to take seriously the task of evoking wonder about the content of the curriculum and to show how this can routinely be done in everyday classrooms. The authors do not wax flowery; they present strong arguments based on either research or precisely described experience, and demonstrate how this argument can be seen to work itself out in daily practice. The emphasis is not on ways of evoking wonder that might require virtuoso teaching, but rather on how wonder can be evoked about the everyday features of the math or science or social studies curriculum in regular classrooms.

Principles of Health Interoperability Tim Benson 2016-06-22 This book provides an introduction to health interoperability and the main standards used. Health interoperability delivers health information where and when it is needed. Everybody stands to gain from safer more soundly based decisions and less duplication, delays, waste and errors. The third edition of Principles of Health Interoperability includes a new part on FHIR (Fast Health Interoperability Resources), the most important new health interoperability standard for a generation. FHIR combines the best features of HL7's v2, v3 and CDA while leveraging the latest web standards and a tight focus on implementability. FHIR can be implemented at a fraction of the price of existing alternatives and is well suited for use in mobile phone apps, cloud communications and EHRs. The book is organised into four parts. The first part covers the principles of health interoperability, why it matters, why it is hard and why models are an important part of the solution. The second part covers clinical terminology and SNOMED CT. The third part covers the main HL7 standards: v2, v3, CDA and IHE XDS. The new fourth part covers FHIR and has been contributed by Grahame Grieve, the original FHIR chief.

Narrative and Numbers Aswath Damodaran 2017-01-10 How can a company that has never turned a profit have a multibillion dollar valuation? Why do some start-ups attract large investments while others do not? Aswath Damodaran, finance professor and experienced investor, argues that the power of story drives corporate value, adding substance to numbers and persuading even cautious investors to take risks. In business, there are the storytellers who spin compelling narratives and the number-crunchers who construct meaningful models and accounts. Both are essential to success, but only by combining the two, Damodaran argues, can a business deliver and sustain value. Through a range of case studies, Narrative and Numbers describes how storytellers can better incorporate and narrate numbers and how number-crunchers can calculate more imaginative models that withstand scrutiny. Damodaran considers Uber's debut and how narrative is key to understanding different valuations. He investigates why Twitter and Facebook were valued in the billions of dollars at their public offerings, and why one (Twitter) has stagnated while the other (Facebook) has grown. Damodaran also looks at more established business models such as Apple and Amazon to demonstrate how a company's history can both enrich and constrain its narrative. And through Vale, a global Brazil-based mining company, he shows the influence of external narrative, and how country, commodity, and currency can shape a company's story. Narrative and Numbers reveals the benefits, challenges, and pitfalls of weaving narratives around numbers and

how one can best test a story's plausibility.

The Great Wall John Man 2010-11-30 China's Great Wall north of Beijing is one of the world's most famous sights. Millions every year climb the line of stone snaking over mountains. We all feel we know the Wall. But we are wrong. It is too big, too varied, too complex to be captured by a few images or a day-trip. Myths surround it. Many believe that the stone barrier marches across all China, that it has been in existence for over 2,000 years, and that it is the only man-made structure visible from the Moon. In fact, most of it is made of earth, and much of it is not there at all. It cannot even be seen from earth orbit, let alone the Moon. Estimates of its length vary from 1,500 to 5,000 miles. Even its name is deceptive - it is not an it, a single entity, but many walls (hence the uncertain length), built at different times. Yet behind the confusion are great simplicities. The many walls are united by two ideas - self-protection and unity - which go back to the First Emperor, who founded the nation in 221 BC. For 2,000 years, the Wall marked the border between China and nomadic peoples to the north and west. Mutual hostility inspired centuries of attacks, counter-attacks and Wall-building, until the northward spread of China in the 20th century made the Wall redundant. For this riveting account, John Man travelled the Wall from the far western deserts to the Pacific, exploring the grandest sections and many 'wild' ones. He is the first writer to describe two unknown walls in Mongolia. He covers two millennia of history, from the country's first unification to the present day, when the Great Wall, built and rebuilt over centuries of war, has become a symbol of tranquillity.

A Robotics Roadmap for Australia Australian Centre for Robotic Vision 2018-06-18 Australia's first Robotics Roadmap is a guide to how Australia can harness the benefits of a new robot economy. Building on Australia's strengths in robot talent and technologies in niche application areas, the roadmap acts a guide to how Australia can support a vibrant robotics industry that supports automation across all sectors of the Australian economy. The world-leading Australian Centre for Robotic Vision, an ARC Centre of Excellence, partnered with industry, researchers and government to drive this important initiative. A national consultation process was held culminating in a series of workshops across key sectors including resources, built and natural environment, manufacturing, services (including transport & logistics), healthcare and

defence. Australia has a unique opportunity to take a leading role in the development of robotic technologies and in the tech sector more generally. The roadmap demonstrates Australia's existing capability and forecasts future applications, as well as providing recommendations on harnessing the new and emerging technologies being developed in Australia today. By describing what is possible and what is desirable, the roadmap aims to create the grounds for the necessary co-operation to allow robots to help unlock human potential, modernise the economy and build national health, well-being and sustainability despite the challenges of our vast and remote geography.
